Manufacturer: MK Gilze

This X-Y Traverse system is developed by us to place on a packaging machine. We can, for example, provide intergration of the system to a Multivac Thermoformer. The X-Y Traverse will then turn off a certain pattern each time, and on this pattern the operator can adjust the position of the print pulse. Also, in consultation with the customer, we can create a Traverse system that can customize a customer.

For more information on a customized quote, you can always contact us.
